● LIVE IN PRODUCTION

Wattanakit Plengsri

IT & Automation Developer · AI Workflow & Integration

Data Science & Software Innovation graduate who builds and runs real production systems as a solo developer — AI-powered LINE chatbots, n8n automation, Cloudflare deployments and internal dashboards. Strong in Python, SQL and web development, now expanding into IT Support & Infrastructure to pair automation with hands-on troubleshooting.

01 Production Automation

8n systems I designed, built and operate end-to-end at Oxlet Auto. Every workflow below is **live in production**, together handling 18,700+ runs and counting.

AI Chatbot & Lead Intelligence

OxletautoMain

LIVE

The core system — a **50-node** workflow receiving LINE events via webhook, using a **Gemini AI agent** to analyze finance cases and recommend lenders, orchestrating Google Sheets (14 ops) and rendering summary images via hcti.io back to LINE.

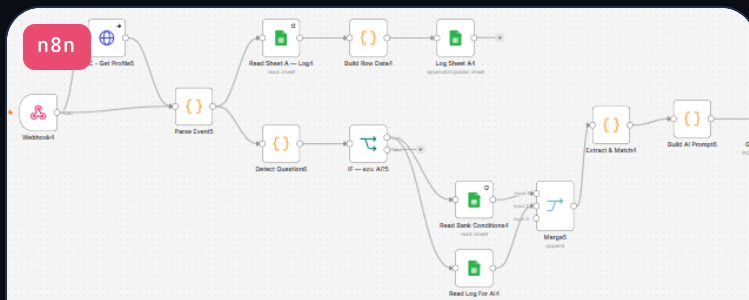

Gemini AI Agent

LINE API

Google Sheets ×14

hcti.io

OxletAuto Senior Bot — Few-shot v7

LIVE

The most sophisticated assistant — receives case messages on LINE, uses **regex to extract customer profiles** (occupation, income, tenure, NCB history, car price, DTI), matches them to bank rules in Google Sheets, **computes installment tables for 6 banks** (KKP/TTB/KBANK/TISCO/AY), then has **Gemini 2.5 Flash** act as a "Senior Coach" via 9 real few-shot examples — scoring win-probability with step-by-step orders, plus automatic case-history logging.

TikTok Ads

Cloudflare

n8n

เก็บข้อมูลไลฟ์สด

LIVE

The largest, most complex workflow — **81 nodes** (33 Google Sheets ops, 13 IF branches) capturing live-stream customer & lead data in real time via webhook, routing it into the central lead database.

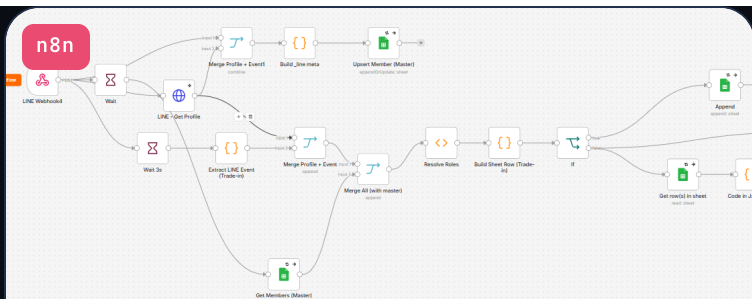

Webhook

Google Sheets ×33

LINE API

81 nodes

n8n

ซื้อขายเทิร์นรถ

LIVE

A **20-node** LINE bot parsing car buy/trade-in cases — resolves sender/buyer roles from LINE names, **auto-matches car models against a 60+ model dropdown** via regex, classifies cases (HOT/VERY HOT/COOL/REJECT), and appends/updates Google Sheets while merging purchasing comments.

LINE Webhook

Car-model NLP ×60+

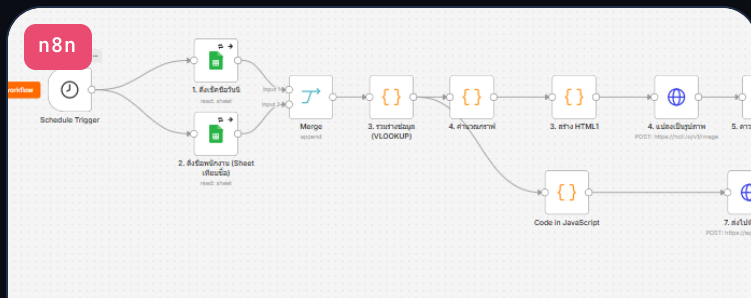

Google Sheets

Case classifier

Sales Operations & Tracking

สร้างตารางเช็คชื่อ

LIVE

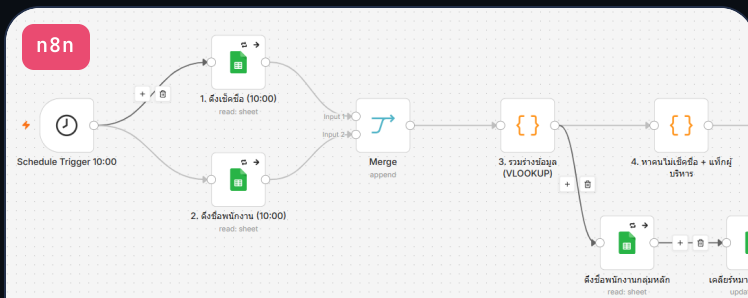

An automated attendance system — merges two sheets (VLOOKUP), computes lateness (5-min grace), builds an HTML table rendered to an image via **hcti.io**, and posts it to a LINE group each morning while tagging anyone not yet checked in.

Google Sheets

HTML → Image

hcti.io

LINE API

แก้คอบส

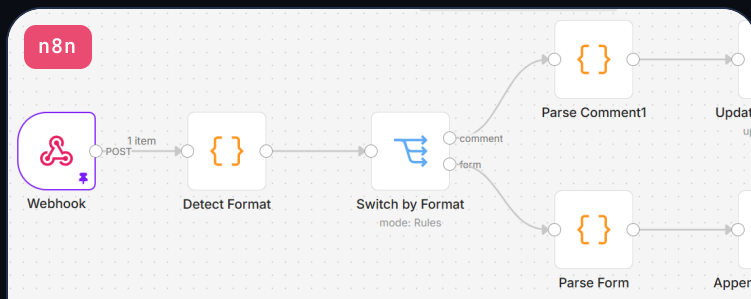

LIVE

An automated 10:00 escalation — VLOOKUP-merges two sheets to find who hasn't checked in, then sends a LINE **textV2 @mention** tagging both the pending staff and managers directly, so nothing slips through.

Google Sheets

VLOOKUP

LINE textV2 @mention

เก็บข้อมูลรับสมัครงาน

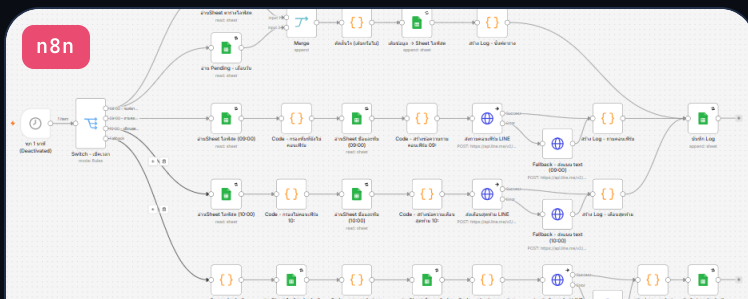

LIVE

A recruitment workflow receiving applicant data via webhook, routing by type with Switch and logging into Google Sheets automatically — easing HR screening and follow-up.

Webhook

Google Sheets

Switch routing

ถามคอนเฟิร์ม

LIVE

An automated follow-up & confirmation flow — **32 nodes** sending confirmation prompts over LINE, parsing replies with Switch, handling logic in Code (12 nodes) and recording outcomes to Google Sheets (11 ops).

LINE API

Google Sheets *11

Switch routing

32 nodes

Reliability & Infrastructure

n8n

Error Trigger

Edit Fields

manual

Error Handler — Line Alert

LIVE

A centralized error handler using n8n's **Error Trigger** to catch any failing workflow and instantly push the details (workflow name / failing node / error message / execution link) to LINE — catching issues before they impact operations.

Error Trigger

LINE Push

Observability

n8n

Schedule Trigger

Data Scraping & Market Intelligence

License Plate Market Analysis — Complete System

LIVE

A fully automated 3-stage daily data pipeline for second-hand car / license-plate market analysis — **02:00** runs two Python scrapers (OKDee, WebTabien), merges & cleans the data into Google Sheets · **03:00** a price-analysis engine processes the market data · **06:00** auto-generates a daily report delivered via LINE & email — with retry / continue-on-fail safeguards against failures.

02 Experience & Projects

From real production work to full-stack and machine-learning projects.

2025 – Present

IT & Automation Developer

Oxlet Auto

- Designed and deployed an **AI-powered LINE chatbot (n8n + Gemini)** that analyzes finance cases and recommends lenders, reducing senior staff's manual workload.
- Built automation logging every lead-coded message into **Google Sheets** via the LINE Messaging API — a centralized real-time lead database.
- Engineered a sales-activity tracker with **SLA** and photo-evidence matching — diagnosed and fixed a production **race condition** causing data loss.
- Developed a **Cloudflare Workers redirect** service tracking lead sources across TikTok/Facebook/Instagram, incl. custom domain & DNS setup.
- Built & deployed an internal **LIFF dashboard** on Cloudflare Pages for in-app reporting; compiled a 7-lender finance database as the bot's knowledge base.
- Provided hands-on support for **network configuration (LAN, DNS)** and CCTV server maintenance.

2024

Senior Project: Cow Analysis System

Django · WebSocket · Random Forest · Deep Learning

- Built a full-stack web app with **Django + WebSocket** for real-time data transmission and visualization.
- Applied **Random Forest** and deep-learning models to analyze behavioral patterns and run predictive analysis on real-world data with high accuracy.

Other Projects

Development & Data Work

Django · MySQL · Power BI · Looker Studio

- **Retail POS System (Django):** a full-stack POS with Django & MySQL for real-time inventory tracking and automated sales reporting.
- **Data Analytics Competition:** analyzed real business data and visualized actionable insights with **Power BI** and Looker Studio under tight deadlines.
- **Student Loan Fund Assistant (2025):** created promotional content in Canva and prepared reports in Excel/Word/PowerPoint while supporting office admin.
